

We understand the important role infrastructure has in helping develop sustainable economies in the Bahamas and across the Caribbean. We have very much focused on ensuring the products and services we provide for our Infrastructure works are to the highest standard incorporating independent quality and compliance testing.

We also recognise the important role education has and we have a long standing record of recruiting local staff and supporting them through a structured training and education programme. This includes strong links with regional universities and local college, to develop joint partnership in helping train and develop young engineers.

Our offering is to provide a high quality, responsive and customer focused service with a primary goal of providing a safe working environment where safety of the general public, the clients staff and our staff is always first on our agenda.

We specialise in heavy civil engineering projects including major highways, airports and landside marine works. We also have a long term offering to undertake utility works with our earthworks and infrastructure projects.

We are able to demonstrate our quality through independent third party certifications and accreditations:

- ISO 9001
- ISO 14001 (Environment)
- ISO 17025
- ISO 45001 (Health & Safety)

Quality is Assured

The quality of your work, in the long run, is the deciding factor on how much your services are valued by the world
